Create the repository with this exact name before submitting the report so the link becomes active.

1.2 1. Introduction

This project is a Web Development Activity-Based Learning submission containing three static HTML and CSS case studies. The implementation has been deliberately kept within the topics listed in the supplied Mid-I syllabus. It demonstrates HTML document structure, elements, classes, text properties, colors, backgrounds, borders, the CSS box model, images, lists, tables, viewport settings, and anchor links.

The visual design follows simple UI/UX principles: clear information architecture, readable typography, color contrast, consistent spacing, visible grouping, and a mobile-first layout. The pages share a common header, footer, colors, and container class while keeping different content for each selected case study.

1.3 2. Syllabus alignment

The project uses the following taught topics: HTML basics and structure; container elements; the CSS syntax and class attribute; text-align, text color, background-color, font-family, font-size, text-decoration, font-style; multiple rules and rulesets; height, width, background-image, background-size, viewport, border, padding, margin, hexadecimal colors; ordered and unordered lists; image elements and void elements; hyperlinks, links within the same document, image elements as visual content, line breaks, horizontal rules, and HTML5 structure.

The project also applies the introductory design topics from the syllabus: interface clarity, user experience, typography, color theory, information architecture, accessibility through alt text and meaningful links, and mobile-first layout thinking.

1.4 3. Technologies used

- HTML5 for page structure and content.
- CSS3 basics for selectors, classes, colors, typography, borders, spacing, backgrounds, widths, and responsive layout.
- SVG image files used through standard HTML `img` elements.
- A simple static server for local testing.

No JavaScript, React, database, backend, login, or advanced interaction library is used in this syllabus-aligned version.

1.5 4. Case Study 1 — Gaming and Esports Website

1.5.1 Purpose

Pulse Arena is a simple tournament information webpage for players and spectators.

1.5.2 Features using syllabus concepts

- Header navigation with anchor elements.
- Page introduction with headings, paragraphs, and a call-to-action link.
- Image element showing a gaming illustration.
- Unordered list describing player information.
- Table for match time, teams, and stage.
- Ordered list for tournament rules.
- Same-document links for “Go to matches” and “Back to top”.
- CSS colors, borders, padding, margin, font properties, and responsive widths.

CASE STUDY 01

Gaming and *Esports*

Pulse Arena is a basic tournament information webpage for players and spectators.

Go to matches | All case studies

Enter the arena

This page demonstrates headings, paragraphs, an image element, colored labels, hyperlinks, lists, a table, borders, padding, and responsive width.

- Team registration information
- Game categories and match stages
- Schedule for spectators
- Simple rules for fair play

FEATURED MATCHES

Match schedule

Time	Match	Stage
5:00 PM	Nova Five vs ZeroDay	Qualifier
7:30 PM	Orbitals vs Drift Club	Semi-final
9:00 PM	Steel Series Final	Final

TOURNAMENT INFORMATION

What players need

1. Choose one game: Valorant, Rocket League, or CS2.
2. Register a team before the closing date.
3. Report to the venue 30 minutes before a match.
4. Respect teammates, opponents, and the coordinator.

Next case study: Fitness and Gym

1.6 5. Case Study 2 — Fitness/Gym Website

1.6.1 Purpose

FORM/01 is a basic gym information webpage for visitors who want to read about programs, coaches, classes, and membership plans.

1.6.2 Features using syllabus concepts

- Hero section with headings, text, and same-page navigation.
- Image element showing a fitness illustration.
- Program cards with background color, borders, padding, and labels.
- Unordered list for fitness information.
- Table for the weekly class timetable.
- Ordered list for membership plans.
- Hyperlinks to the other case studies and the top of the page.
- Responsive card layout using a simple media query.

CASE STUDY 02

Fitness and *Gym*

FORM/01 is a simple gym information webpage for members who want a clear weekly plan.

View programs All case studies

Move with purpose

The page uses basic CSS text properties, colors, a background, the box model, an image, ordered and unordered lists, and a table.

- Strength and beginner programs
- Trainer information
- Weekly class schedule
- Membership choices

TRAINING PROGRAMS

Choose your plan

BEGINNER

Build the base

Four weeks of simple strength exercises and movement practice.

INTERMEDIATE

Power forward

Six weeks of strength training with recovery guidance.

EVERY LEVEL

Move better

Mobility sessions for flexibility and everyday energy.

WEEKLY SCHEDULE

Class timetable

Day	Class	Time
Monday	Strength Circuit	6:30 AM
Wednesday	Mobility Flow	7:00 PM
Saturday	Community Lift	8:00 AM

Membership plans:

1. Starter - ₹999 per month
2. Build - ₹1,499 per month
3. Unlimited - ₹2,199 per month

1.7 6. Case Study 3 — College Fest Management Website

1.7.1 Purpose

RVR Utsav is a campus festival webpage containing the event lineup, schedule, rules, and coordinator contact details.

1.7.2 Features using syllabus concepts

- Navigation links between the landing page and case-study pages.
- Image element showing a college fest banner illustration.
- Event cards grouped by technical and cultural categories.
- Unordered list for event categories and rules.
- Table for the three-day festival timetable.
- Horizontal rules to separate content groups.
- Coordinator information with a line break.
- Same-document “Back to top” link.

CASE STUDY 03

College Fest *Management*

RVR Utsav is a basic college event webpage with a lineup, schedule, rules, and registration information.

View events | All case studies

Make some noise

This page demonstrates information architecture: a visitor can jump from the introduction to the event list, timetable, rules, and contact details.

- Technical events
- Cultural events
- Three-day timetable
- Rules and coordinator details

EVENT CATEGORIES

Find your event

TECHNICAL

Build Rush

Rapid prototyping challenge in the seminar hall at 10:00 AM.

CULTURAL

Open Mic Afterdark

Music, poetry, and stand-up at the amphitheatre at 6:30 PM.

TECHNICAL

Data Detective

Analytics sprint in CSE Lab 2 at 11:00 AM.

FESTIVAL TIMETABLE

Three days, one campus

Date	Highlight	Venue
18 Nov	Opening and Build Rush	Main Quad
19 Nov	Open Mic Afterdark	Amphitheatre
20 Nov	Finale and Awards	Central Stage

FESTIVAL GUIDE

Rules and contact

- Carry your college ID for every registered event.
- Teams must report 30 minutes before the start time.
- Respect venue capacity and keep shared spaces clean.
- Follow the coordinator's decision during event rounds.

Coordinator: Student Activities Council

1.8 7. Project organisation

```
WD-Activity-Based-Learning/
├── index.html
├── styles.css
├── README.md
├── GITHUB_UPLOAD.md
├── gaming/index.html
├── fitness/index.html
├── college-fest/index.html
├── assets/
└── report/web-development-abl-report.pdf
```

The root page introduces the student and links to the three case studies. `styles.css` is shared by all pages so the class names, colors, box model, typography, and responsive rules remain consistent. Each case study has a separate HTML file and its own syllabus-relevant content.

1.9 8. Testing and observations

The project was checked with a local static server. The landing page, all three case-study routes, the stylesheet, and the image assets returned successfully. Desktop screenshots were captured at 1280 × 900 pixels and mobile screenshots at 390 × 844 pixels. The mobile review confirmed that the content remains readable, the cards stack, navigation remains visible, and tables fit inside the page container.

1.10 9. Conclusion

This revised project demonstrates how basic HTML and CSS concepts can create three complete webpages with different purposes. It stays within the supplied Mid-I syllabus while still applying introductory UI/UX principles such as hierarchy, contrast, spacing, navigation, and mobile-first thinking.
